

GIT 102

<https://nulab.com/learn/software-development/git-tutorial/git-basics/#what-is-git>

Git branch

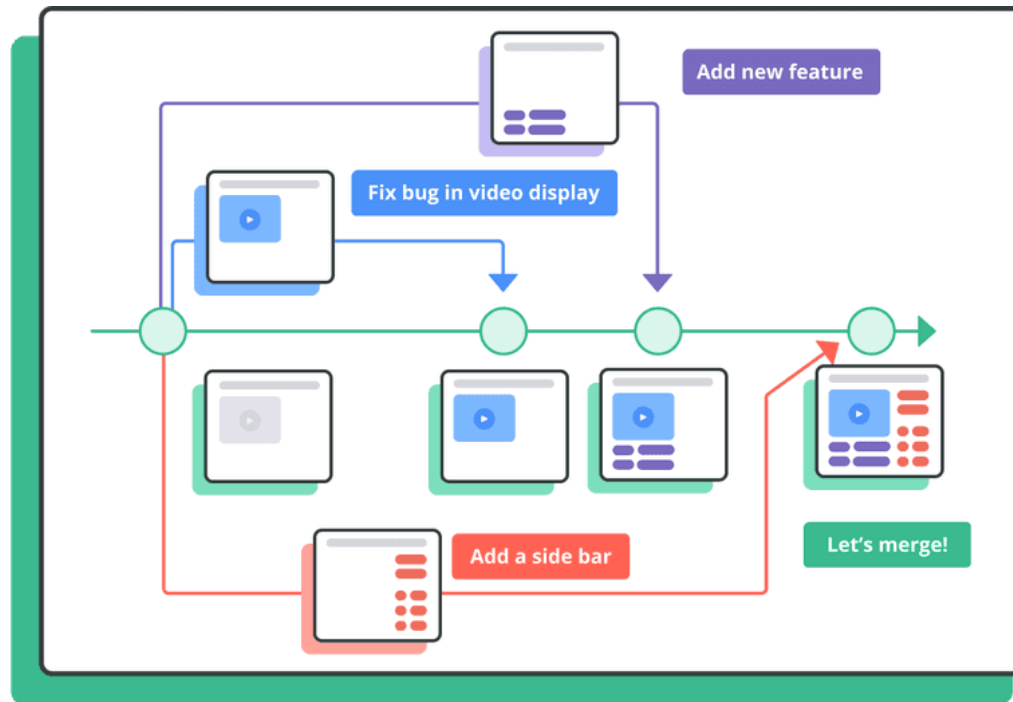

- linee di sviluppo indipendenti all'interno di un repository
- ogni branch rappresenta un'istantanea dei file del progetto in un determinato momento.

main branch

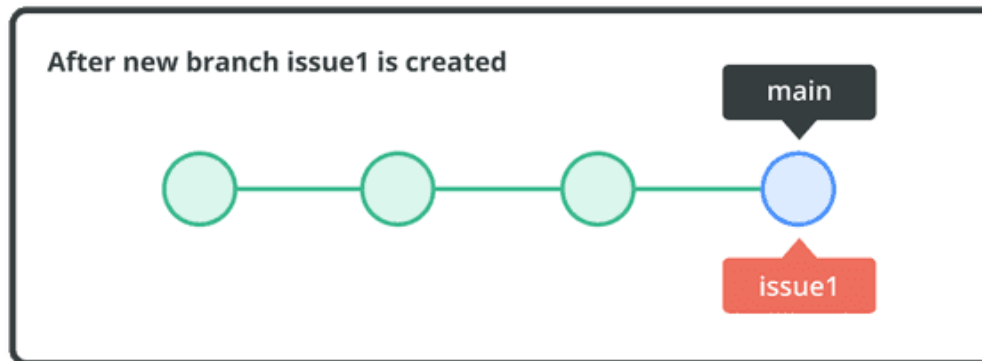

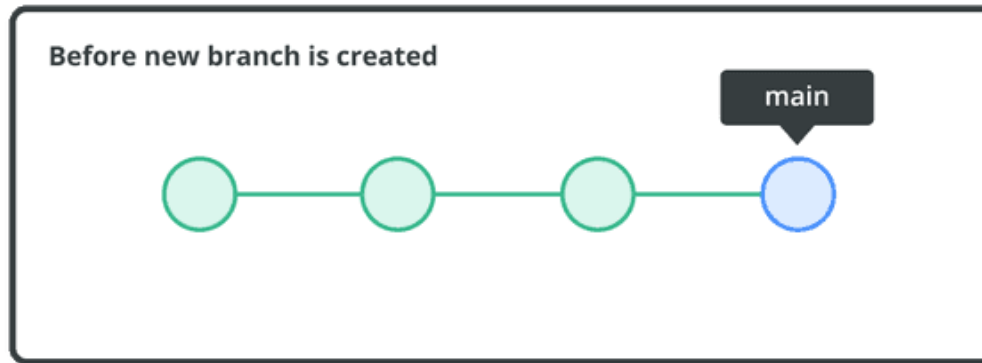

- il flusso principale di sviluppo del progetto
- È una pratica comune creare un nuovo ramo per ogni compito

New branch

- `git branch <nome>`

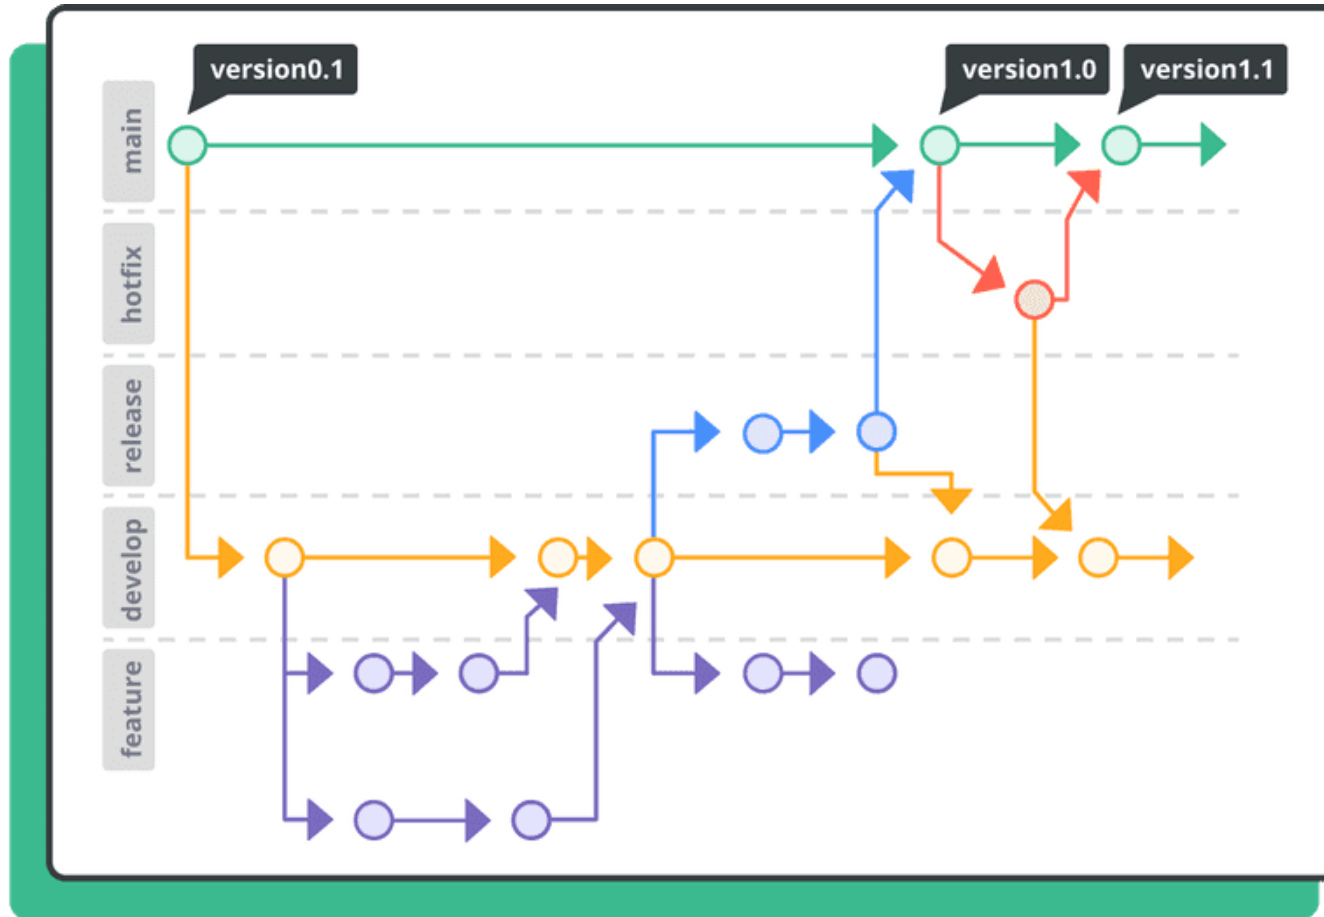

Cambiare branch

git checkout <nome/id>

- Imposta la cartella di lavoro ad un branch o un commit
- HEAD puntatore al branch/commit corrente
- Per cambiare branch devo aver "salvato"
 - git commit ...
 - **git stash**
 - salvo lo stato corrente e torno al commit precedente
 - **git pop ...** - recupero lo stato salvato

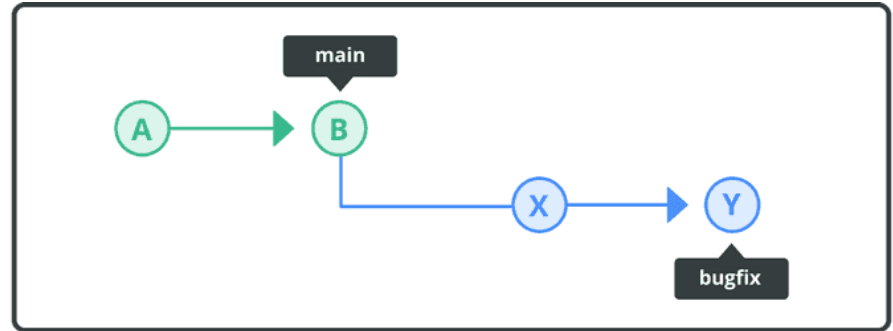

Gitflow Workflow

git merge

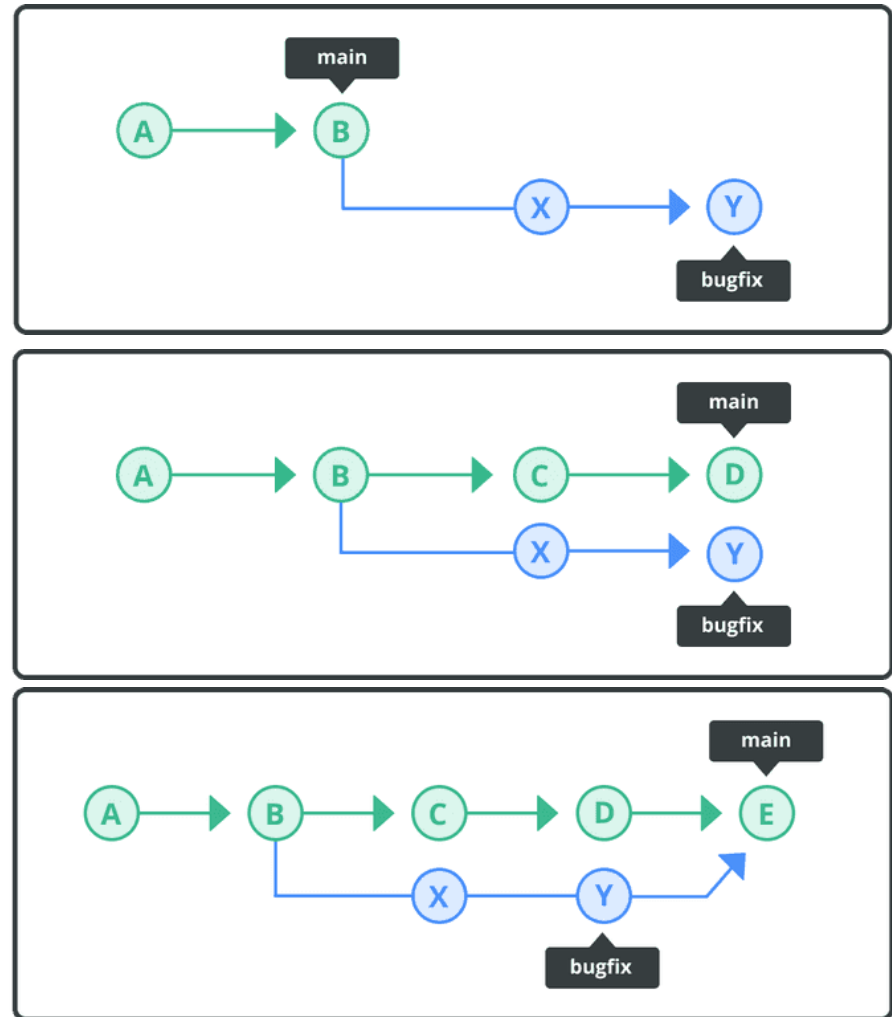

- unire due branch
- fast forward

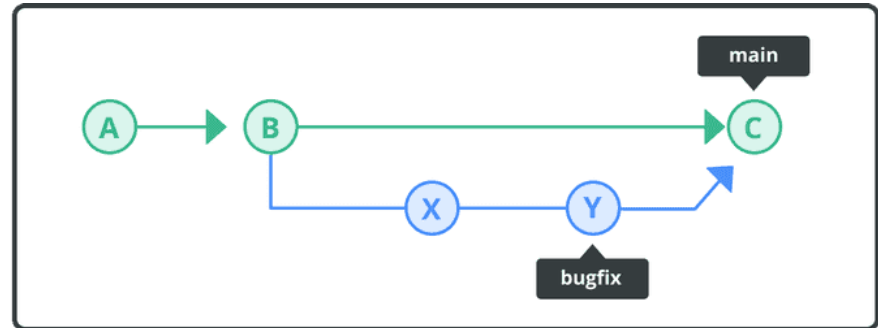

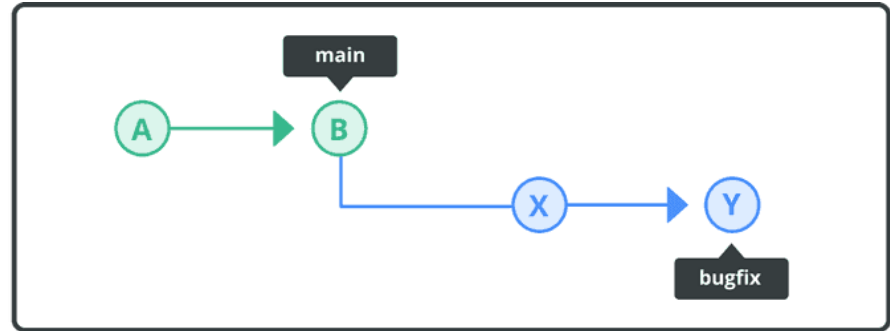

git merge

- unire due branch
- merge commit

git merge

- Unire due branch

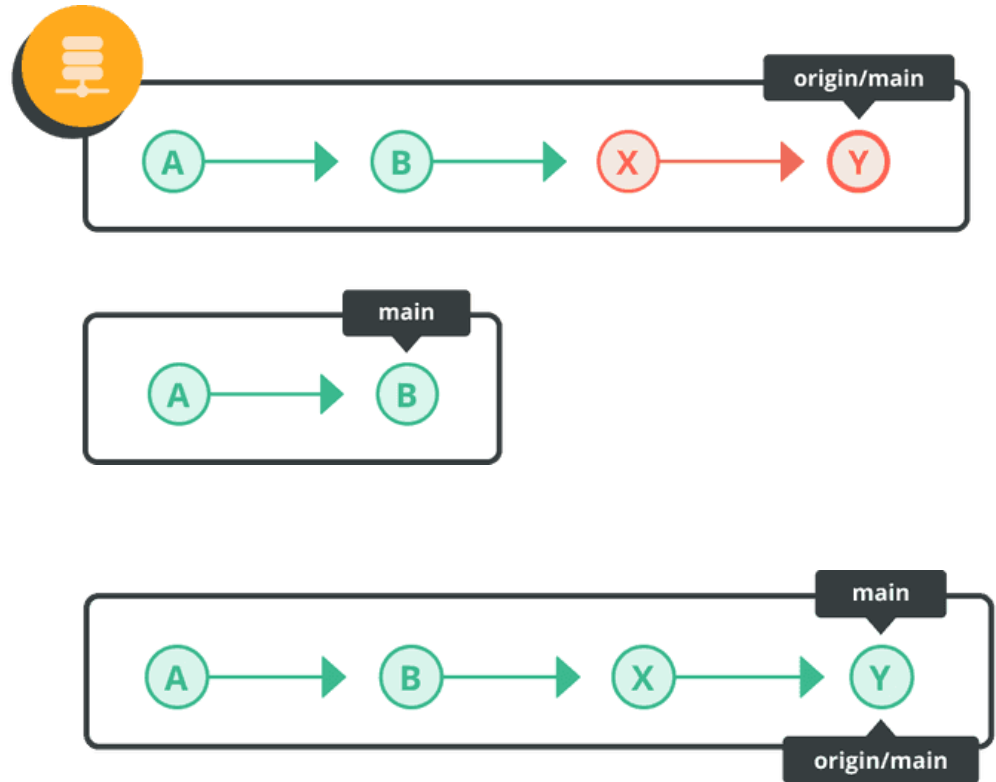

branch remoti

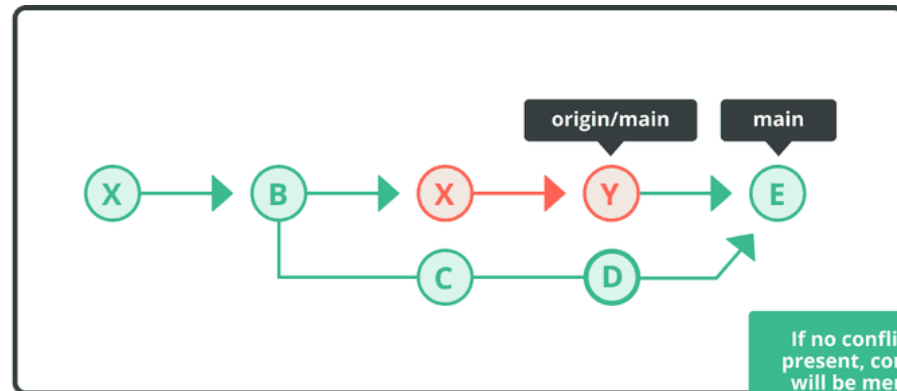

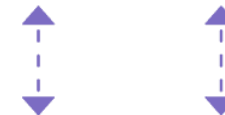

- pull

- fetch
- merge

branch remoti

- merge commit

If no conflict is present, commit will be merged automatically!
